PVA\

ODUCTION

, was founded in 1992 by president Anthony Hynes. Hynes began selling dispensing valves for automated and manual dispensing pplications out of his home prior to moving to Rensselaer Polytechnic Institute's (RPI) Incubator Center later that year. It was there that PVA began building XYZ robots to automate their growing valve technology. PVA's dispensing valve product line grew rapidly to include technology that proved superior for accurately applying conformal coating materials. In 1994, PVA debuted a selective conformal coating system that would later become the PVA2000. The PVA2000 improved on existing XYZ plotting systems by introducing a closed-loop servo controlled process that proved increasingly accurate and rugged.

PVA quickly began to claim local and national accolades by winning the 1995 National Incubator Tenant of the Year and the *Capital District Business Review*'s Small Business of the year in 1998. PVA claimed *SMT Magazine's* Vision Award for innovative valve technology and *Circuits Assembly's* prestigious Service Excellence Award for three consecutive years.

PVA is now headquartered in a 30,000 square foot facility in Halfmoon, New York with regional sites stationed throughout North America, Europe, and Asia. PVA continues to bring our customers the finest quality in automated and manual dispensing solutions while servicing well over 2000 modules at many of the world's largest manufacturers.

PVA continues to be owned and operated by founder Anthony Hynes.

PROGRAMMING

Each PVA robot is delivered with our proprietary Windows®-based programming software, PathMaster®. PathMaster is an intuitive point and click interface that allows programmers of various technical backgrounds to easily create paths of motion in minutes. PathMaster features numerous programming tools that are specifically tailored to coating and dispensing processes. Area fill functions, cut and paste array patterns, and line by line editing are but a few of the features you will enjoy.

PathMaster also comes with a free offline programming package that allows you to create motion at your desktop. Import CAD drawings to create bead or dot programs or utilize FastPath™ to quickly teach coating programs via digital images. Your purchase from PVA will include:

- PathMaster® CD with offline programming package
- Free lifetime software upgrades
- Unlimited free programming support via our call center (518-371-2684)

For more information on PathMaster®, visit http://www.pva.net/PDF%20Files/PathMaster%20Sell%20Sheet.pdf.
For more information on FastPath™ offline programming, visit http://www.pva.net/PDF%20Files/FastPath%20Sell%20Sheet.pdf.

CUSTOMER SUPPORT

At PVA we pride ourselves on providing every business partner with exceptional post sale support. *Circuits Assembly* magazine has recognized our commitment to this aim by awarding PVA with the prestigious Service Excellence Award for three consecutive years. PVA's support infrastructure is second to none in the industry with regional centers stationed throughout North America, Europe, and Asia providing immediate local response.

Your PVA order will include free initial process development at our facility prior to shipment and on-site installation and training at your facility upon request.* Advanced training at PVA's facility is always free for the life of your equipment.

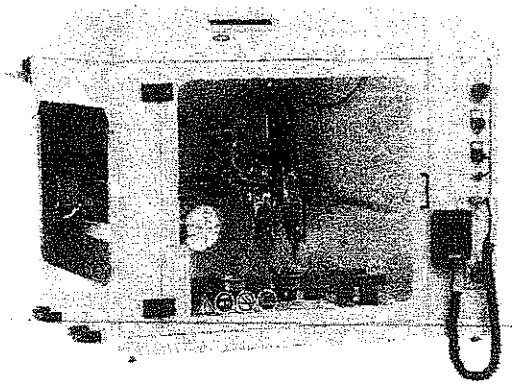
CONFIDENTIAL - REDACTED

PVA350 DETAILS

The PVA350 is a programmable three or four-axis robot suitable for virtually any coating or adhesive dispensing application. The PVA350 employs a robust gantry system featuring precision ball screw slides driven by brushless DC servo motors. Every axis of motion features optical encoder feedback for a truly closed-loop process.



Specifications

X-Axis Stroke	400 mm (15.75")
Y-Axis Stroke	400 mm (15.75")
Z-Axis Stroke	100 mm (4")
Repeatability	0.025 mm (0.001")

Facilities

Power	120V-220V +/-10%, 50-60 Hz
Air	80 psi, dry unlubricated
Exhaust	300 cfm (coating applications only)

For more information on the PVA350 and to download a data sheet, visit http://www.pva.net/PDF%20Files/PVA350.pdf.

QTY	PART NUMBER	DESCRIPTION	UNIT PRICE	EXTENDED
1	PVA350	**PVA350 Benchtop System** ▲ Fully enclosed work area and doors with safety interlocks	$ [redacted]	
	PVA-CAMERA	**Programming Camera** ▲ Slim programming camera with crosshair generator	$ [redacted]	
1	PVA-PCB-FIX	**Adjustable Printed Circuit Board Fixture**	$ [redacted]	$ [redacted]

VALVE MOUNT OPTIONS

The PVA350 can offer a variety of valve mount configurations to customize your process. Utilizing the robot's high payload capacity, multiple valves can be installed on the motion platform to process multiple assemblies simultaneously, apply multiple materials, or use multiple application heads to achieve the desired process results.

Valve	FCS300-ES	FC100-C	FCM100	FC100-MC	FCS300
Application Type	Atomized spray	Non-atomized	Micro propulsion	Bead, dot	Atomized spray
Suitable Coatings	All coating types	Solvent-based	All coating types	All coating types	All coating types
Pattern	Circular	Film	Bead, dot	Bead, dot	Circular / fan
Pattern Width	0.125" – 0.5"	0.25" – 0.5"	0.010" min	0.010" min	0.25" – 2"+

For more information on PVA's application heads and to download a data sheet, visit http://www.pva.net/Data%20Sheets.htm.

QTY	PART NUMBER	DESCRIPTION	UNIT PRICE	EXTENDED
1	FCS300-ES-M	**FCS300-ES Atomized Spray Valve Mount**	$ [redacted]	$ [redacted]
	FC100-C-M	**FC100-C Non-Atomized Film Coat Mount**	$	
1	FCM100-M	**FCM100 Micro Propulsion Valve Mount**	$	$
	FC100-MC-M	**FC100-MC Front Closing Valve Mount**	$	
	FCS300-R-M	**FCS300 Atomized Spray Valve** ▲ Round spray cap (0.25" – 1")	$	
	FCS300-F-M	**FCS300 Atomized Spray Valve** ▲ Flat spray cap (0.75" – 2"+)	$	

FOUR-AXIS MOTION

A programmable fourth axis option permits rotation of the dispense head in a 350° motion. With this option, an application valve can tilt at an adjustable angle and rotate. This is critical in instances where coating must be applied on all sides or underneath a component. This is an upgrade over more common single or dual tilt capabilities as these can only approach one or two sides of a component respectively. This is a fully controllable axis of motion with coordinated travel and acceleration and deceleration on the fly.

* PVA's fourth-axis configuration and rotational motion is protected under US patent number 6,132,809.

QTY	PART NUMBER	DESCRIPTION	UNIT PRICE	EXTENDED
	PVA-4X	Optional Fourth Axis Upgrade	$ [redacted]	

MATERIAL RESERVOIRS

Material tanks are available in one, two, and ten-gallon sizes. One and two gallon tanks contain an oval opening that requires material to be poured into the reservoir. Two and ten gallon pressure vessels are available with an open top that permit an entire material bucket to be dropped into the container. Alternatively, disposable plastic liners are available for these tanks and allow for quick cleaning in applications that warrant pouring of material. One pound and one liter tanks allow an entire bottle to be placed into the reservoir so clean up is minimal.

Note: Additional tank sizes and pump ratios available by request

SPARE PARTS PACKAGE

PVA offers a kit of common spare parts for the PVA350 in standard package. This kit includes valve seals and needles, relays, cable assemblies, a brushless motor, and fuses. For a comprehensive list of components, please ask your PVA sales representative. A comprehensive, customized machine spare parts list will follow with your operating manual and will include all pertinent options selected for your process.

QTY	PART NUMBER	DESCRIPTION	UNIT PRICE	EXTENDED
	PVA350-SP	Standard PVA350™ Spare Parts Kit	$ [redacted]	

TOTAL PROJECT COST INCLUDING OPTIONS: $ [redacted]

WARRANTY

PVA warrants your order from manufacturing defects and labor for one year. Soft seal wearable items such as o-rings, needle tips, and material lines are not included in the warranty. Unlike many warranties, PVA does not shorten the warranty period if the system is utilized in multiple shifts per day.

TERMS & CONDITIONS

PAYMENT
50% down, 30% upon successful test at PVA and prior to shipment, 20% net 30

DELIVERY
7 weeks after receipt of deposit

SHIPMENT
Collect, FOB PVA Factory, Halfmoon, NY
Air ride van recommended

INSTALLATION & TRAINING
All training completed at PVA is free of charge. On site installation is billed at a cost of $950.00 per day plus expenses. Weekend and US holiday rates may vary.

ORDER CANCELLATION POLICY
Buyer may only cancel the order for equipment in writing with a cancel charge as per the following schedule:

Cancellation Notice Received	Cancellation Fee Multiplier
0-30 days from order date	25%
31-60 days from order date	35%
More than 60 days from order date	70%

AUTHORIZED SIGNATURE

Frank R. Hart
Director of Marketing and Regional Sales

This quotation is valid for 60 days from the date of issue and does not include any applicable federal, state, or local taxes. Prices are subject to change at anytime after this quotation has expired. This quotation can only be withdrawn or modified prior to expiration date by written notice from PVA to you. No terms and conditions stated on the Purchase Order shall modify the terms or conditions contained in this proposal.

ORDER ACCEPTANCE & SHIPMENT RELEASE FORM

Thank you once again for your valued order of PVA products. For your records, each individual module and its corresponding serial number included in your order are listed below.

MODULE	SERIAL NUMBER
PVA 350	W3267

We are sorry you are unable to visit PVA to evaluate your order prior to shipment. In lieu of your evaluation, PVA warrants that the above modules have been manufactured to meet each engineering build specification approved prior to commencement of production. In turn, SpaceX, agrees to the following:

- The information contained within the original engineering specification is correct. In the event that modifications to the equipment are requested, and such changes were not included in the original engineering specification, SpaceX will be responsible for any installation, fabrication, and integration costs as these additions are not covered under PVA's warranty.
- PVA offers, free of charge, process development during my equipment evaluation prior to shipment of said modules. By foregoing my evaluation of this equipment, PVA cannot be held liable for assuring that my process parameters are met. Any costs incurred to modify the original process are the responsibility of SpaceX.
- Any term payments tied to successful evaluation at PVA prior to shipment and/or shipment of your order may be executed.
- Shipment per arrangements set forth in the purchase order agreement is granted.

This document in no way affects the conditions of your original PVA equipment warranty.

In the event you wish to schedule a PVA service technician to support your installation and provide operator training at your facility, please contact Pedro Flores at 518-371-2684 x235 (pflores@pva.net).

Where Precision Drives Production

Dear Nick,

Thank you for your recent order **# 49742**. We take pride in providing the finest dispensing and automation products available and trust you will be a loyal, long-standing customer. In follow up to your order, I wanted to offer you my personal thanks, while also providing you with a few recommendations for assuring your project is completed in an accurate and timely fashion. Each sales order is assigned to an engineering team here at PVA. The engineers assigned to your project are:

Project Engineer
Alex Duggan
518-371-2684 ext. 228
aduggan@pva.net

Controls Engineer
Mark Kniese
518-371-2684 ext. 215
mkniese@pva.net

Your project engineer will be in touch with you shortly to confirm all project specifications. Your prompt approval of these specifications will assure that your order is completed in a timely fashion. Tentatively, your order is scheduled to be complete on **5/20/09**. As this date approaches, it is advisable to schedule your trip to PVA for final evaluation and training. This trip can be scheduled by contacting:

Customer Service Manager
Pedro Flores
518-371-2684 ext. 235
pflores@pva.net

Please attempt to schedule this trip up to two weeks in advance to allow the greatest flexibility in available training dates. While we do strongly suggest visiting PVA prior to shipment, if you decide to forego this opportunity, Pedro Flores will still be a vital asset in scheduling installations, service trips, or troubleshooting our equipment.

Further, there are a couple of other key contacts at PVA that may be in contact with you during the build process and throughout our working relationship. These contacts are:

Spare Parts Orders and Pricing
Kevin Durante
518-371-2684 ext. 240
kdurante@pva.net

Accounts Receivable
Amy Wu
518-371-2684 ext. 223
awu@pva.net

Shipping Logistics
Robert Deerfield
518-371-2684 ext. 238
rdeerfield@pva.net

If there are any other outstanding issues or questions you may have that we can assist with, please feel free to contact your salesman **Frank Hart** or myself at any time as well. Again, thank you for your order. We look forward to working with you on this order.

Best regards,

Jeremy Prusky
Operations Manager
PVA

CONSTRUCTION CHECKLIST

Frame

- [x] Workcell frame visually inspected
- [x] Frame members are properly squared
- [x] All exposed connectors have Bosch covers in place

Pneumatics

- [x] Pneumatic tubing visually inspected
- [x] Pneumatic solenoids actuated
- [x] All solenoids are labeled on manifold
- [x] All tubing is labeled with labels facing the same direction
- [x] Rotary actuators are adjusted to allow 0-45-degree motion
- [x] Air regulators confirmed operational

Mechanical Inspection

- [x] Confirm system is mechanically built to approved engineering specification

Top Frame / Motion Platform Inspection

- [x] X and Y axes are confirmed square with appropriate calibration fixture
- [x] Guide rail has been aligned with the frame utilizing appropriate calibration fixture
- [x] Gantry has been aligned with the guide rail
- [x] Slide motion is visually inspected as smooth

Electrical Check

- [x] All wires are run in proper order and labeled correctly
- [x] Electrical debug completed

Material Line Inspection

- [x] All material lines visually inspected and free of kinks
- [x] Material lines are labeled with labels facing the same direction
- [x] Material lines pressure tested to confirm quality

Safety Inspection

- [x] All guarding visually inspected and installation confirmed
- [x] Low level exhaust sensor tested and confirmed operational
- [x] All interlocks tested and confirmed operational
- [x] Emergency stop tested and confirmed operational
- [x] System startup safety check tested

CONTINUITY CHECK

☑ Point to point continuity check completed to confirm no wiring errors

POWER CHECK

☑ Terminal voltage confirmed to match approved engineering specification
☑ All fuses installed and manually inspected
☑ Emergency stop voltage confirmed
Supply voltage required

DOCUMENTATION CHECK

☐ Serial number documented in PVA database
☐ Electronic copy of Production & Quality Control Manual completed
☐ Hard copy of Production & Quality Control Manual completed

PRE-DEBUG CHECKLIST

☑ Basic de-bug program installed
☑ I/O check completed
☑ Conveyors calibrated and flow direction confirmed
☑ All pneumatics cycled and confirmed operational
☑ Flow controls are set
☑ Serial tag number confirmed to match machine
☑ Axes homed and amps confirmed operational
☑ Power to all motors confirmed
☑ Encoders confirmed operational
☑ Teach pendant installed and confirmed operational
☑ Operator interface toggled and manually inspected
☑ All pneumatic stops and locators toggled and confirmed operational
☑ Fluid lines, regulators, and fittings inspected and tested
☐ AB box / Computer / Monitor installed and operational (if applicable)
☐ Blower Hz matches correct frequency (if applicable)
☑ QC Burn cycle completed to 1500 counts

GALIL MOTION CONTROLLER TUNED

☑ Tuned controller to five volts

This PVA system has been inspected to meet all quality standards as outlined above and has been found to match the approved engineering specification, and has passed all electrical and mechanical inspections.

Subject: PVA Machine Specifications

Hi Nick,

I received your order for a PVA 350 from Frank Hart and I have created the preliminary machine specifications. Please look them over carefully for errors and fill in any missing information indicated by red text. Once the specifications have been completed and verified, we can begin production of your machine. If you have any questions, please let me know.

Thanks,
Alex

Nicholas,

Thanks for the information about the coating material. Did everything else on the specification sheet look alright?

Alex

Alex,

Coating Material is NVOC through Electrolube. Coating material is not solvent based, but they have an NVOC Machine Cleaner that is used to clean out the machine.

Hi Nick,

I received your order for a PVA 350 from Frank Hart and I have created the preliminary machine specifications. Please look them over carefully for errors and fill in any missing information indicated by red text. Once the specifications have been completed and verified, we can begin production of your machine. If you have any questions, please let me know.

Thanks,
Alex

Subject: RE: meter-mix application

Hey mang,

No need for Dave and his metering mix systems.

Looks like they only want a 20oz cartridge retainer&cap with spray & needle valve for the pre-mix material and a 6oz cartridge retainer&cap for the solvent ,so it can flush the premixed material out right after doing a batch of boards.

I've done this fluid delivery line several times.

Let me know if you need a project # for reference,Urquhart can also tell you how this is done

Regarding options for spraying two part coatings –we are not there yet.

It is going to be a long time before I could do any real work on a full MMX system for them... unless Dave f wants to work on that part.

I could set them up with a quote for a syringe system for premixed material...

Jon,

I just spoke with an engineer from SpaceX named Duc Phan (pronounced "Dook Fawn"). They have one of our 350 machines, s/n W3267. They want to switch to a 2-part material, Huntsman Arathane 5750. They are currently considering just pre-mixing the material and then flushing it out after a couple hours, using a series of valves and solvent tanks. Mike Leonard may be assisting them with getting the electrical schematics and discussing program options with them in case they try to do this on their own.

They would also like to hear what options we have for them as far as a 2-component meter-mix system. Can you contact Duc and let him know you would be the man to pick up the ball on this? Then we can discuss what the best configuration would be.

Looking at your request.. We could put pneumatic ball valves to control the material and flush. I think it will waste a good amount of material and solvent. You will need to flush out the material with each rinse cycle and then purge out the solvent until the material starts flowing again...

We could add timers to the machine to stop and alarm every 30 minutes or hour to remind the operators to flush and fill the system..

Do you already have 24 VDC actuator valves that you are planning to use? Why do you need analog control for these? Do you have a data sheet on them?

Best regards,

Jon Connelly

Subject: Arethane 5750 Automate Rinse and Pruge PVA 350, P/N: SPCX2115 S/N: W3267

Hello John,
I am a Process engineer for SpaceX located in Hawthorne, CA. We have the PVA 350, P/N: SPCX2115 S/N: W3267. We are using the Arethane 5750 material that have 2 hours cure time, which we are concern that operator may forgot to purge and rinse the material when the job is done. To avoid this problem I am hoping to automate the purge and rinse process. The plan is to have the 24VDC actuator valves to turn on/off the purge and rinse reservoirs after the coating program.
I need help writing the subroutine program for rinse and purge and identify which analog signals can I connect the 24VDC actuator valves and the which digital signals to turn them on?

Thank you in-advance for helping!

PVA Workcell

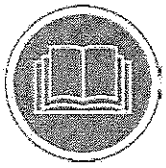
Installation and General Guidelines

Rev A

1.3 Safety

Certain warning symbols are affixed to the machine and correspond to notations in this manual. Before operating the system, identify these warning labels and read the notices described below. Not all labels may be used on any specific system. Read the workcell manual for additional safety information related to the workcell and its components.

Always wear approved safety glasses when you operate or work near the workcell.



Before you operate the system, read and understand the manuals provided with the unit.

Never put hands or tools in areas with this symbol when the machine is in operation. A dangerous condition may exist.

Read and understand the manuals provided with the unit before any repairs or maintenance is done. Only a qualified individual should do service.

Use caution when there are pressurized vessels. Find and repair any leaks immediately. Always wear appropriate safety equipment when you work with pressurized vessels or vessels that contain chemicals.

Shear hazard from moving parts. Avoid contact.

In situations where inattention could cause either personal injury or damage to equipment a warning notice is used.

1.4 System Description

This manual applies to the following Precision Valve & Automation, Inc. workcells:

PVA350™	PVA6000™
PVA650™	Delta 6
PVA2000™	Delta 8
PVA3000™	

The valves are mounted to the end effector of a two, three, or four axis Cartesian robot. All dispensing is done in the work area enclosed with safety glass or polycarbonate. The axes have limits to prevent damage to the machine. The dispense path and active heads are controlled by a program stored in the motion controller. The motion controller can save up to 30 programs at one time.

The operator controls the workcell with PVA Portal software. This includes machine setup, manual operation, program selection, and automatic operation. Machine status and error messages are shown in the program window and the light tower. The operator(s) must have read this manual, or have been trained and understand the operation of the machine.

Any uses that are not approved could result in dangerous conditions that the safety features on the system cannot prevent.

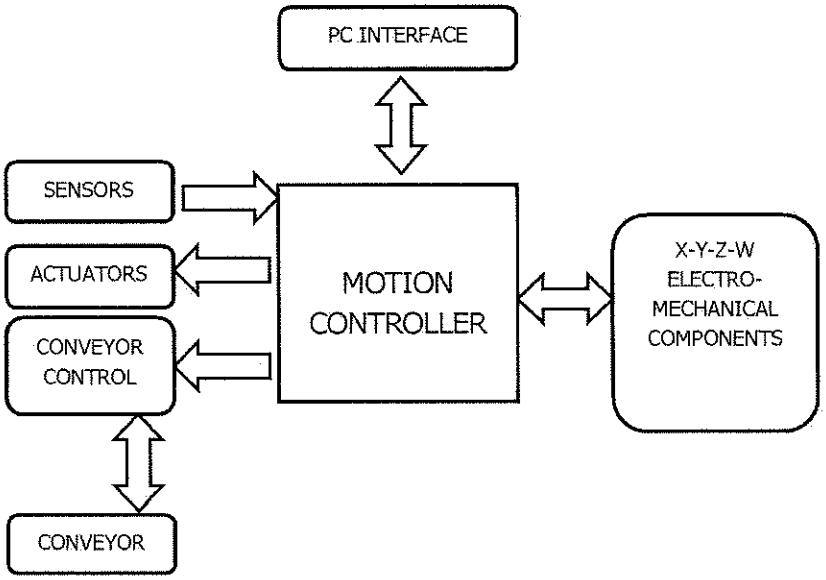


Figure 1: Workcell Functional Block Diagram

3.6 Notices and Warnings

- You must wear safety glasses, gloves, and long sleeves.
- Lock-out and tag the air and power supplies before you service or clean any part of this equipment
- Release the pressure before any hose (air or fluid) is removed
- All hoses must have the correct pressure rating
- Use only replacement parts recommended or supplied by the manufacturer
- Stay away from all parts that move when the system is in operation

Hello Alex and David,

I'll be coming to your facility to install the new PVA equipment.
When will you be ready for me?
Please keep in mind the machine will need power, compressed air and exhaust hooked up in order to run.

Also, please verify that this is the correct address:
1 Rocket Road Hawthorne, CA.

Thank you.

Revision 1

Provisional Technical Data Sheet

NVOC
Non-VOC Conformal Coating

Product Description

A flexible, moisture cure, conformal coating based on polyurethane technology for the protection of electronic circuitry. NVOC has been specifically designed to eliminate the use of volatile organic solvents and is suitable for use in selective spray equipment.

Features

- Excellent adhesion to a wide variety of substrates
- Wide operating temperature range
- Resistant to mould growth
- Excellent solvent resistance
- Cured coating can be removed with Electrolube Remover Gel (DRG)
- Contains a UV trace for ease of inspection
- Very low vapour pressure

Approvals	**RoHS Compliant (2002/95/EC):**	**Yes**
	IPC-CC-830	**Meets**
Liquid Properties	Appearance:	Amber Liquid
	Specific Gravity (Density) @ 20°C:	1.12g/ml
	Vapour Pressure (Calculated):	< 0.01 KPa
	Solids content:	100%
	Viscosity @ 20°C:	85-95cPs
	Touch Dry:	70 minutes @ 20°C
	(Humidity Dependent)	30 minutes @ 60°C
		20 minutes @ 80°C
	Recommended Drying Time:	36 Hours @ 20°C
		4 Hours @ 60°C
		2 Hours @ 80°C
Dry Film Coating	Colour:	Amber
	Operating Temperature Range:	-60°C to +125°C
	Max Temperature Range (30 mins)	+150°C
	Pencil Hardness	7H
	Flammability:	Meets UL94 V-0
	Thermal Cycling (MIL-1-46058C):	Meets approval
	Insulation Resistance:	> 1 x 10^{13}
	Moisture Resistance (MIL-1-46058C):	Meets Approval

BS EN ISO 9001:2000 Certificate No. FM 32082

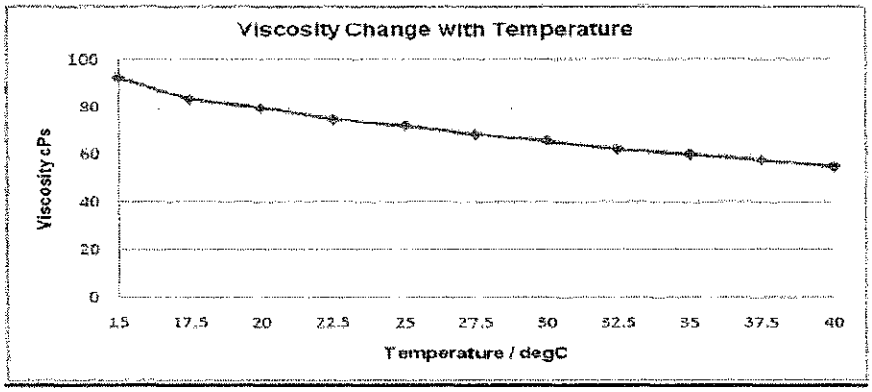
Directions For Use

Substrates should be thoroughly cleaned before coating. This is required to ensure that satisfactory adhesion to the substrate is achieved. Also, all flux residues must be removed as they may become corrosive if left on the PCB. Electrolube manufacture a range of cleaning products using both hydrocarbon solvent and aqueous technology. Electrolube cleaning products produce results within Military specification.
Please refer to the material safety data sheet for health and safety information.

Spraying – Bulk

NVOC is supplied in a ready to use viscosity for spraying.

NVOC is suitable for use in both PVA and Asymmtek Select Coat equipment.



Drying

NVOC can be dried at room temperature or accelerated via drying in either a convection or IR oven. A typical IR profile with the PCB set to a constant temperature of 80°C will achieve an initial cure time of approximately 30 minutes. Increasing the humidity of the surrounding area will also reduce the cure time of the coating.

Cleaning

Electrolube's NVMC has been designed as a suitable cleaner for use with NVOC. Machines should be flushed through thoroughly with NVMC prior to coating use.
